# EXPECT the EXTRAORDINARY

## our CULTURE

DCI began with a corporate culture that is committed to innovation, creativity, trust and respect for all. A culture that encourages both individual and professional growth. A culture that is guided by five core values.

## our core PURPOSE

Providing that road map to reach our goals is a core purpose that is powerful, compelling and virtually limitless in scope. By pursuing our core purpose, our leadership inspires others - our employees, dealers and customers - to improve, do their best and be successful;

## INTEGRITY

Delivering and Expecting the highest ethical conduct.

## SERVICE

Exceeding expectations by paying attention to details.

## INNOVATION

Identifying and Seizing opportunities through creative solutions.

## TEAMWORK

Supporting each other to enhance our collective strengths.

## EXCELLENCE

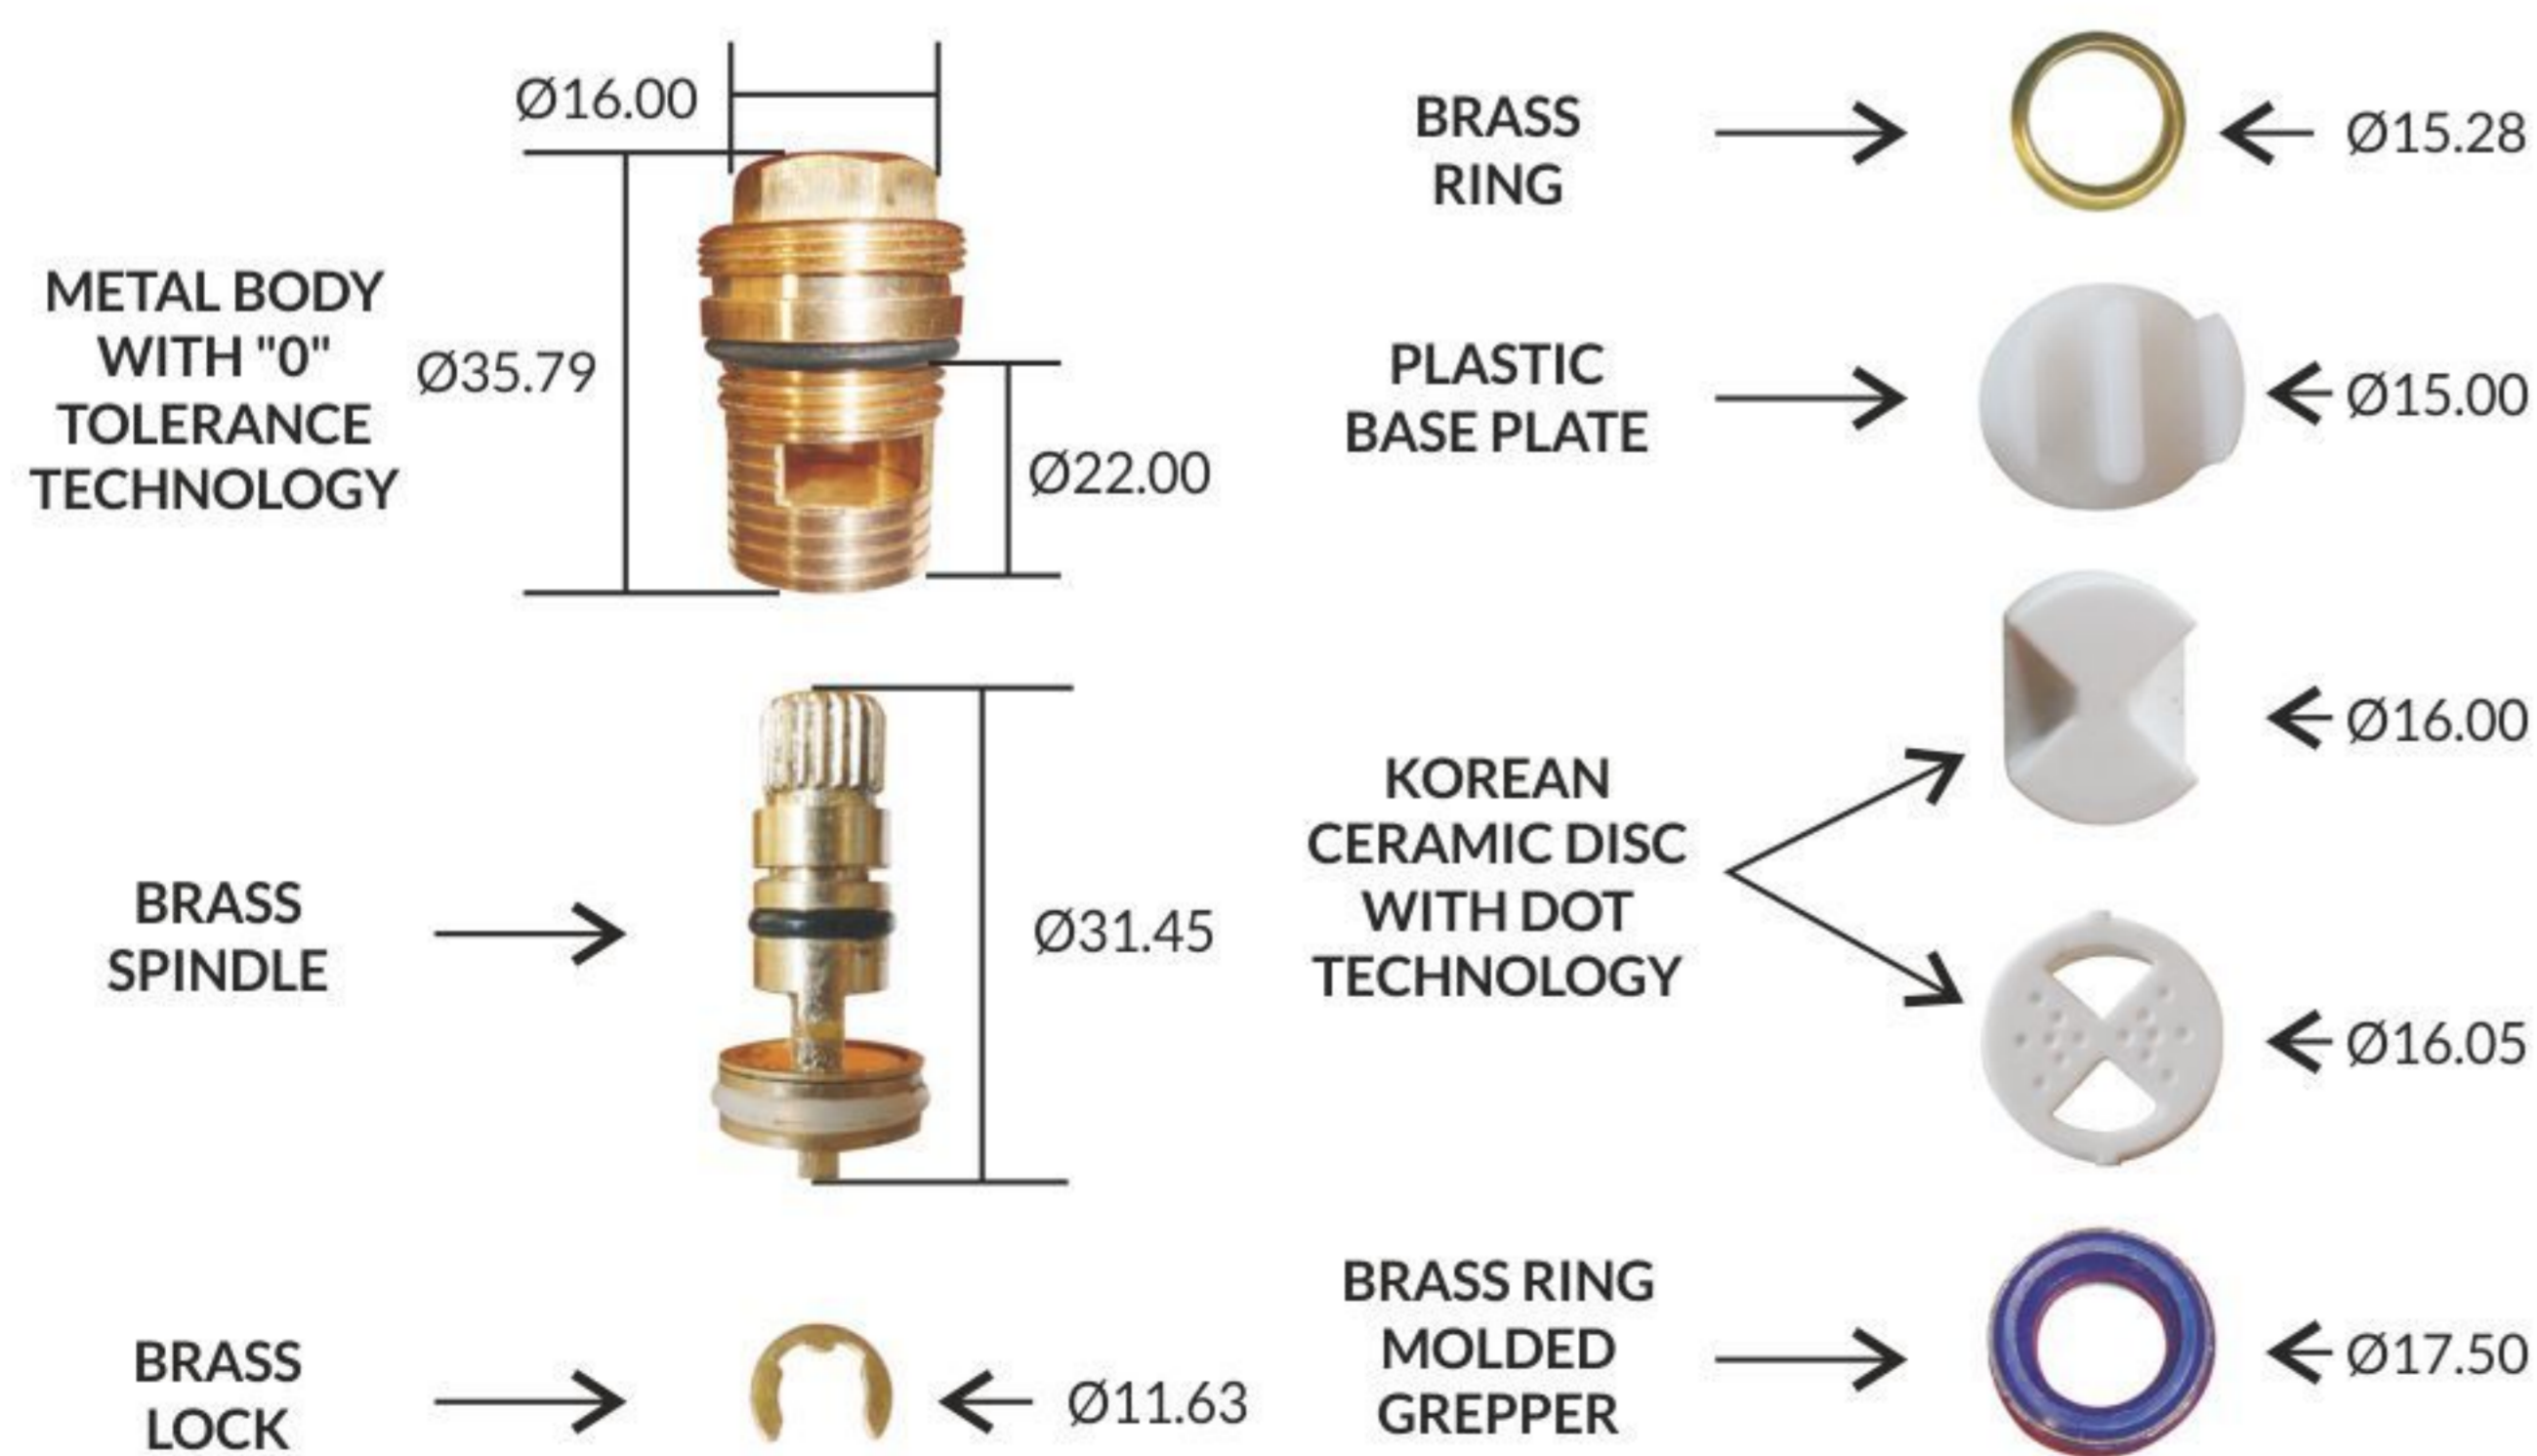

Passionately dedicated to being the best.

## ISO 9001:2015 CERTIFIED COMPANY

## COMPLETE CERAMIC SPINDLE

### PRODUCT DESCRIPTION

### SPINDLE TECHNOLOGY

We are manufacturer of top-class Ceramic Cartridge in the world, which is with fine quality for unvarying using with quality guaranteed through 100% Water tightness tested under water pressure. The rigidity of the cartridge are high, Even under using condition with unstable water pressure, performing life 5,00,000 operating times are guaranteed.

All the metal parts of the internal cartridge, are made of extruded brass rod ensuring flawless performance for a longer period.

Ceramic disc taps operate in a different way from conventional taps that have main spindles. They have a cartridge in the body of the tap containing a pair of ceramic discs, each one with two holes in it.

SERVICE WARRANTY

### WARRANTY

DCI BATH products are subjected to strict controls during every step of the production cycle to provide the best guarantees on the quality of the product. For this reason, the DCI BATH taps are warranted against manufacturing defects for a period of 7 years.

with **Luxurious Faucet**

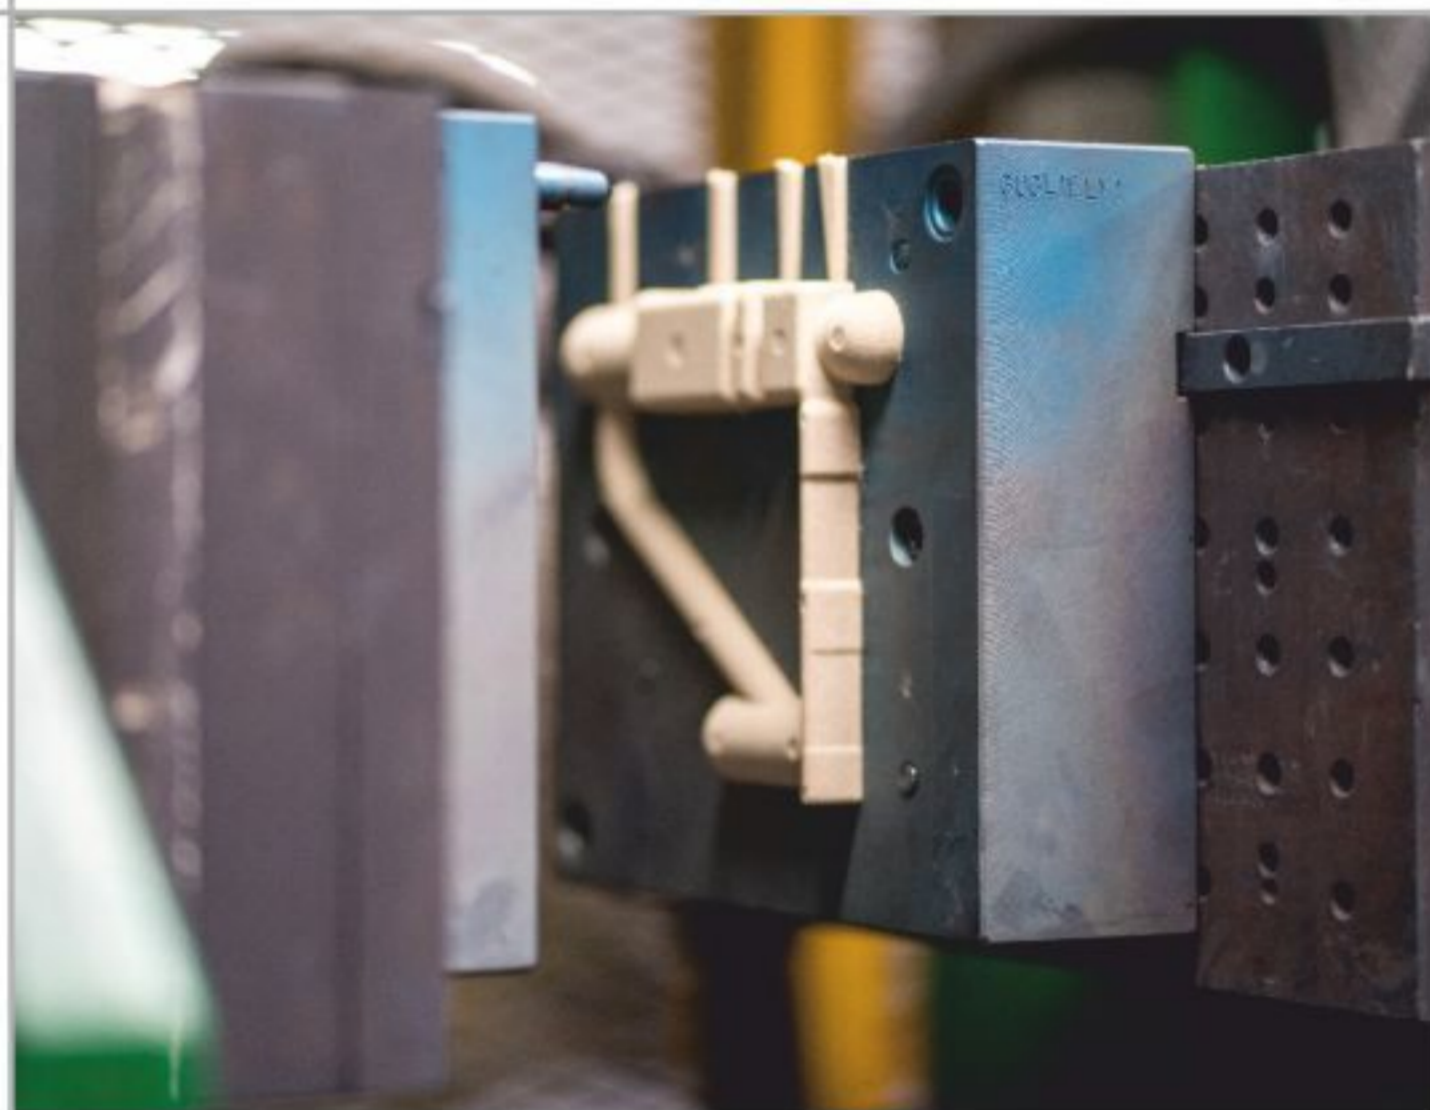

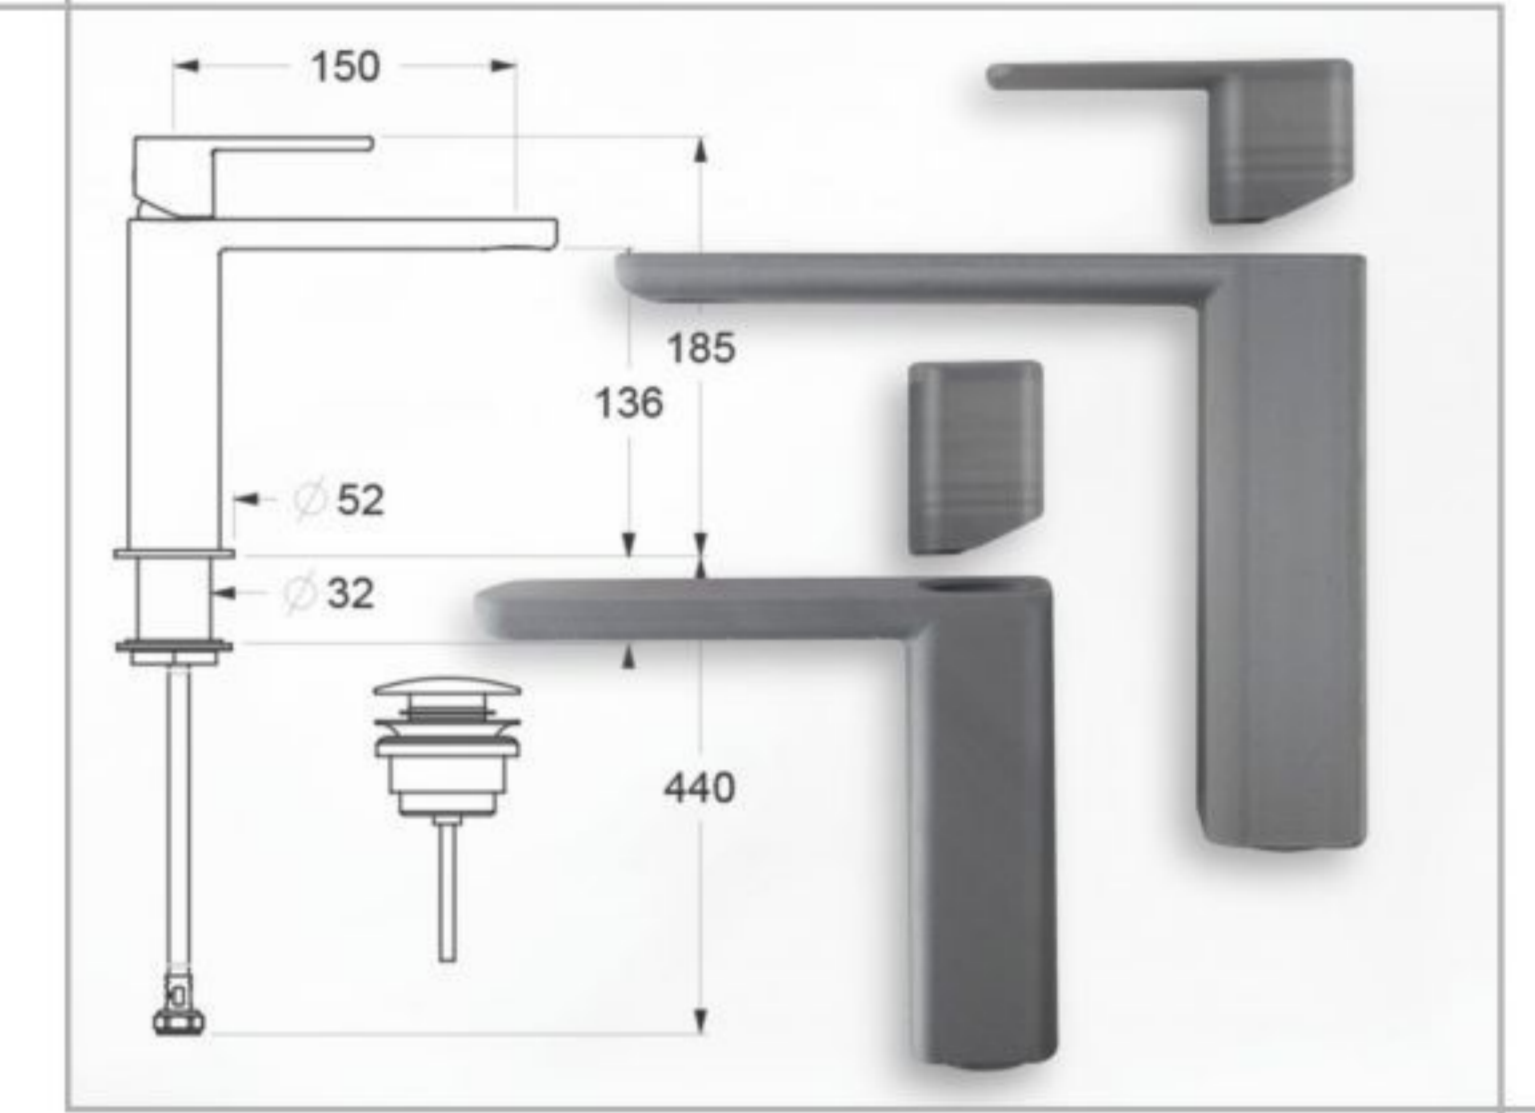

### DESIGN

DCI products are born from ideas, wit and mastery of our Team. Every single production cycle is checked and analysed in detail. In the design and planning phase, the style office analyses both shapes and materials the tap will be manufactured with. In the technical office the product is engineered through the use of 3D software.

### PROTOTYPING

It consists of the creation of prototypes printed in different ABS plastic materials thanks to a proper 3D printer. This passage allows to check their shapes and ergonomics. Once approved, the product can be industrially manufactured.

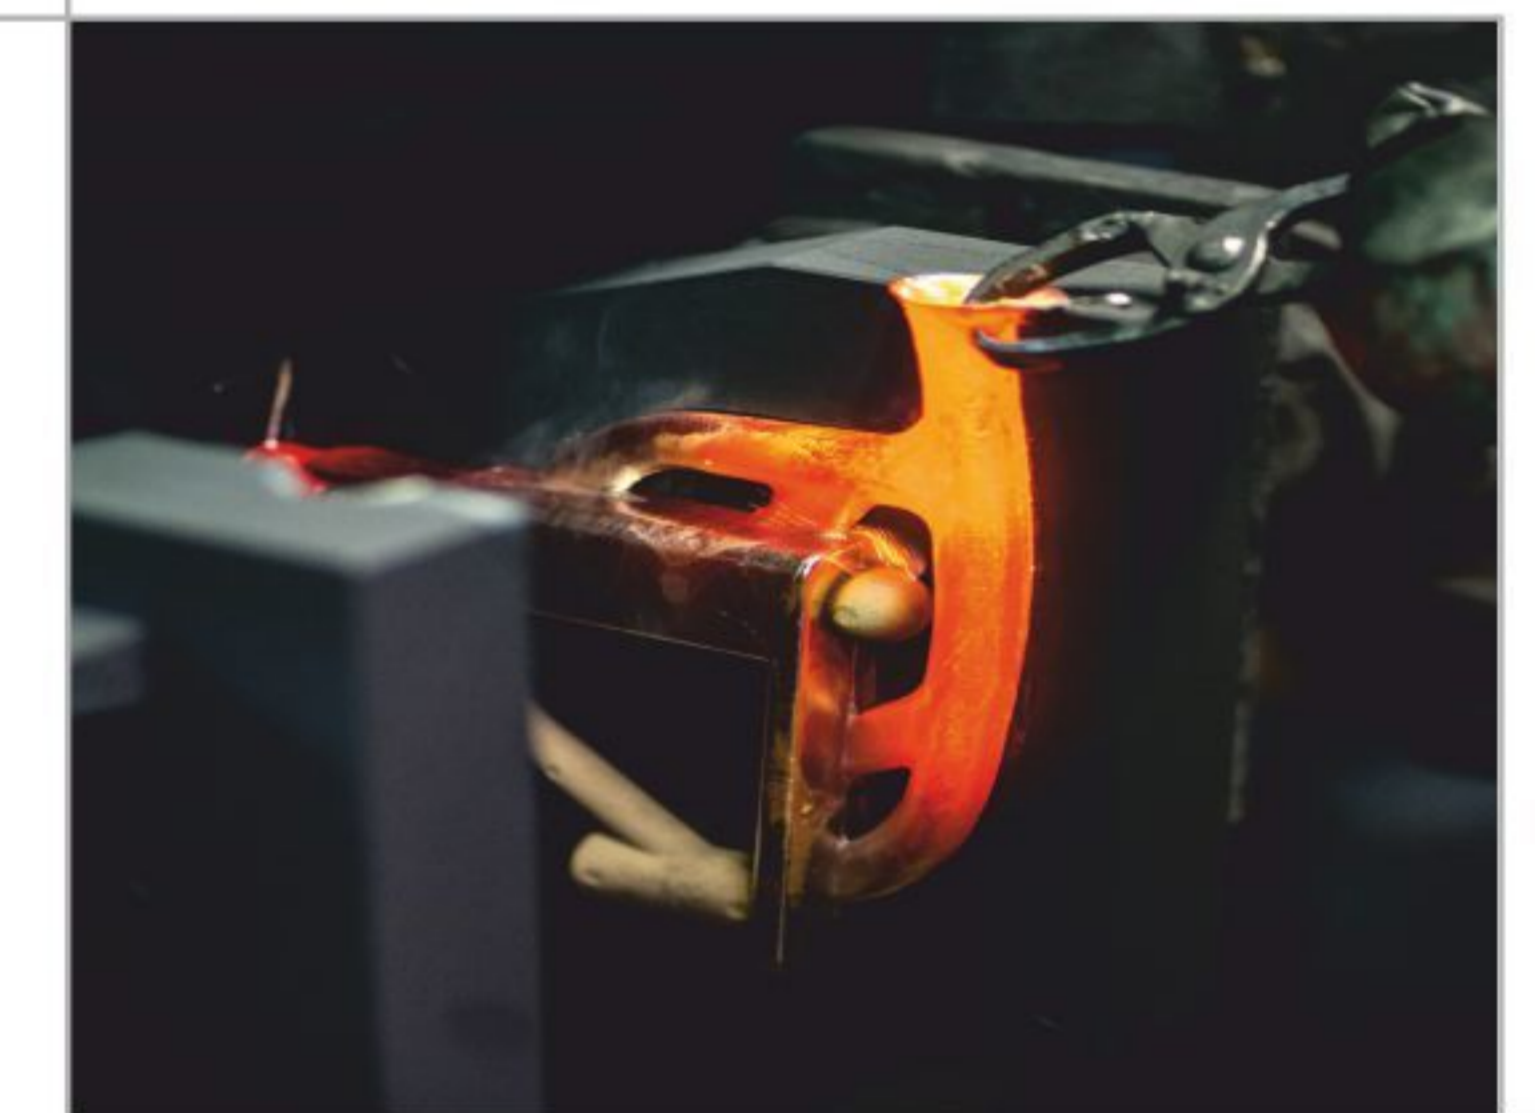

### CORE AND SHELLS CREATION

During this phase the raw bodies of our taps are obtained by carrying out all the related activities. The process concerns the creation of so-called cores that will be used to get the holes in the fusion, that are the parts that must not be filled by the liquid metal (cast brass). The cores are made of earth and sand mixed with agglomerates obtained by a negative mold called core box.

### FOUNDRY, CASTING PROCESS

The molten metal (1000°) is stripped from the oven, collected in a ladle and poured into the mold through the casting channel. Once solidified and cooled, we extract our raw tap from the mold and with a vibration process the core crumbles into sand to get the channels where water will flow.

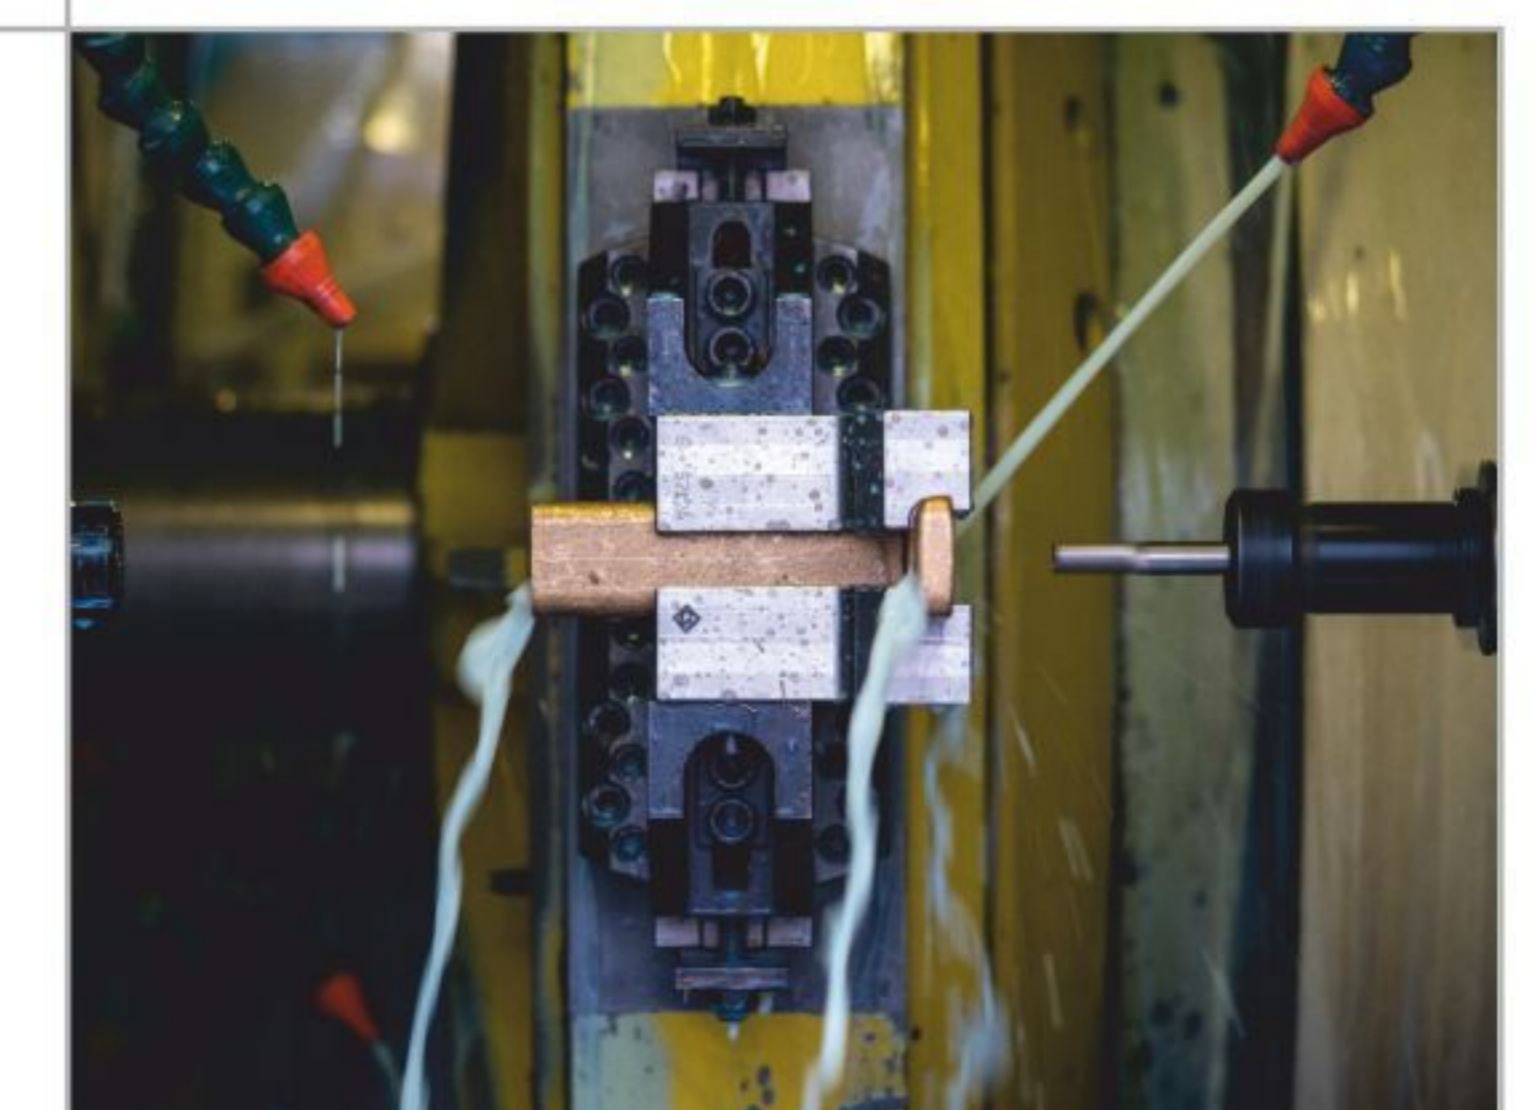

### MOLDING

It is an alternative process to the foundry. Through the hot pressing of the brass there are lower application costs and some typical defects of the castings are totally eliminated such as, for example, porosity.

### TRANSFER TURNERY

Industrial production process, for different mechanical machining, obtained by chip removal. Turnery is defined by a rotary piece motion and a mostly straight tool movement (in milling and drilling the tool has instead a rotary motion).

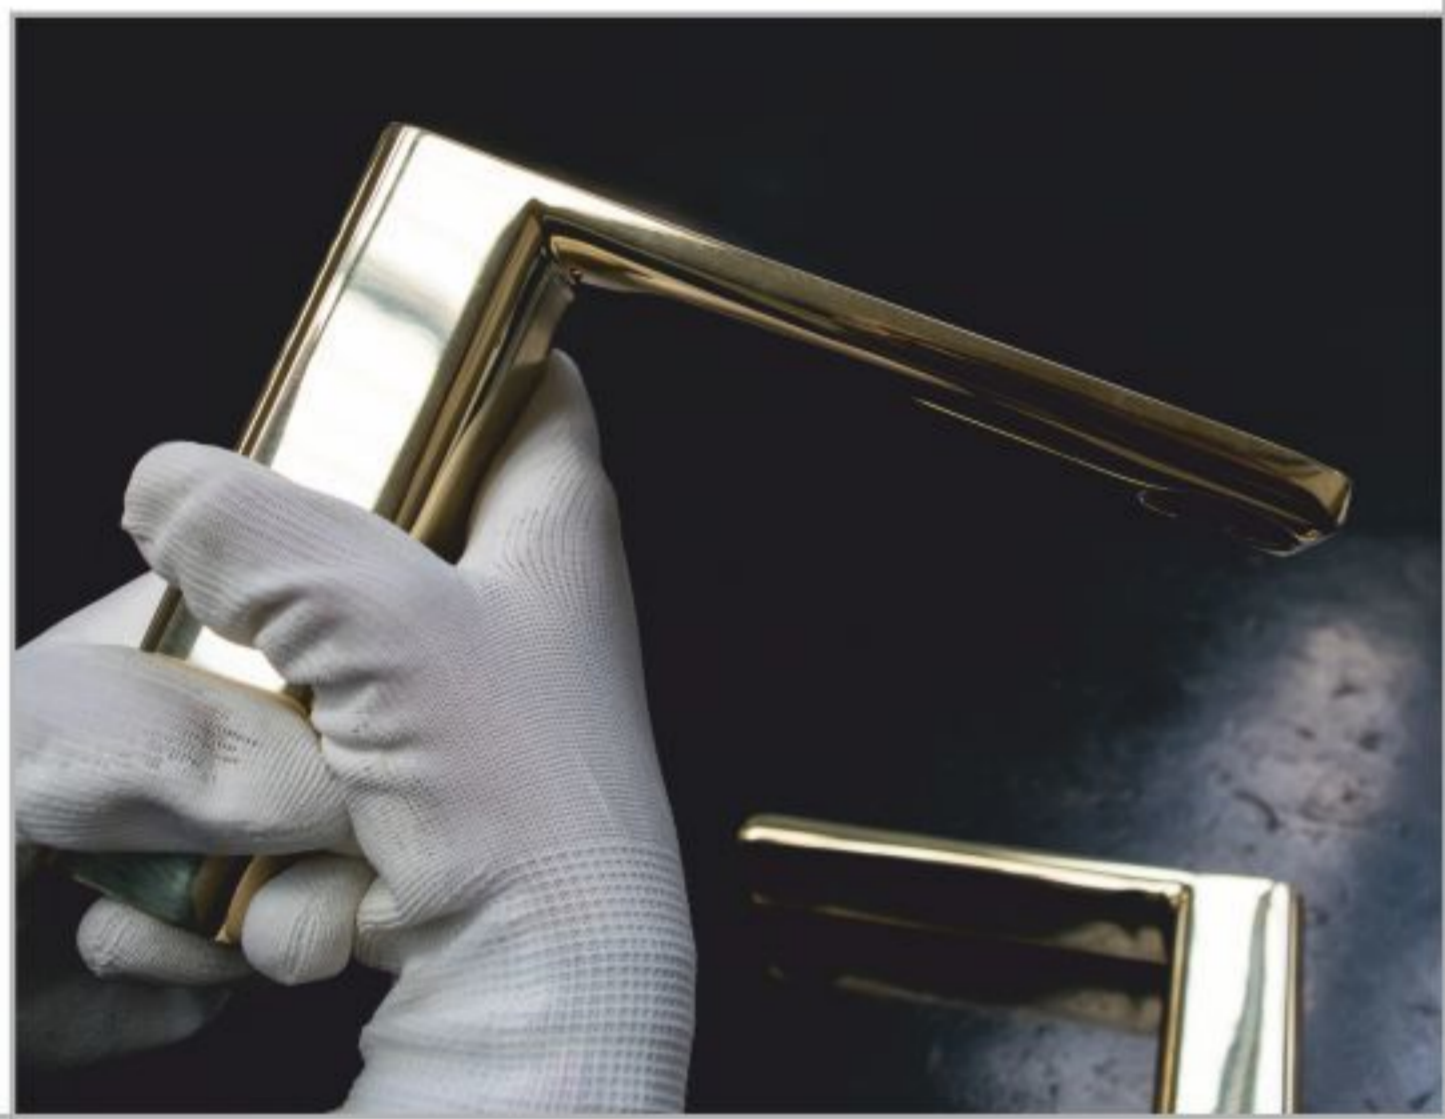

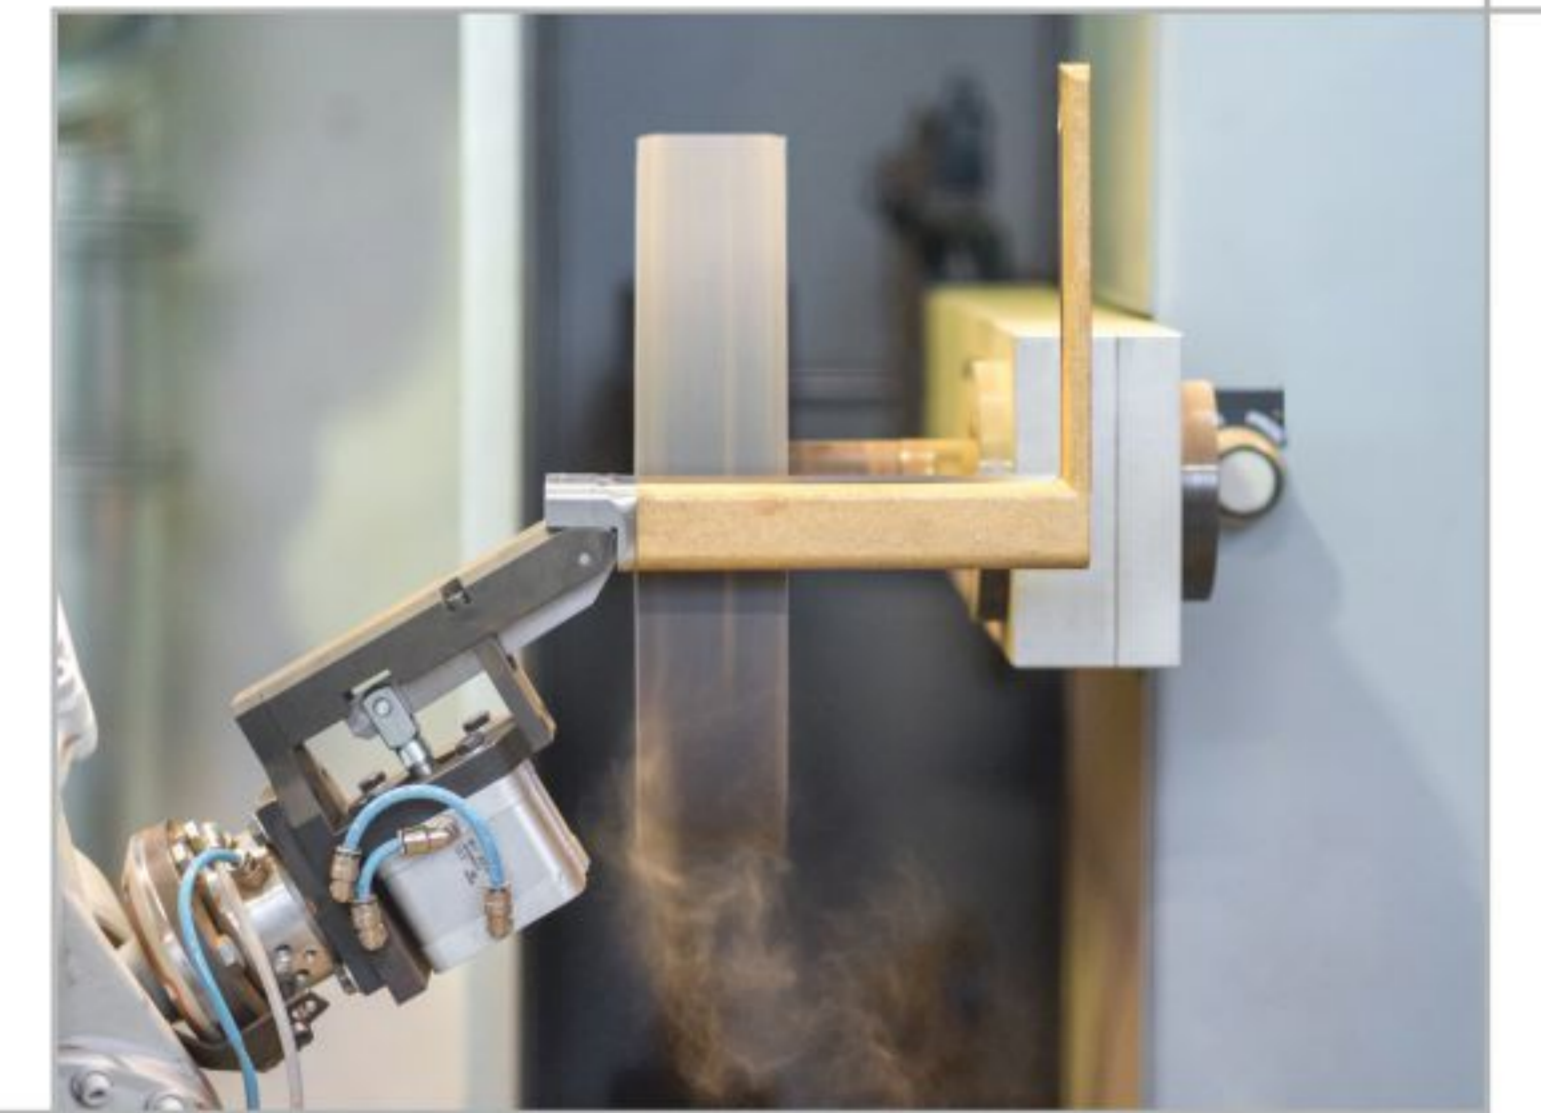

## NUMERICAL CONTROL TURNERY

Bar turning represents a subtype of the one with numerical control or cnc, a mechanical processing type that uses computerized systems for the management of production processes.

## CLEANING / FROSTING

Metal working processes that prepare the activities for real metal work such as nickel plating, chrome plating and gilding. This result is obtained by means of very fine and uniform abrasives that reduce the sizes of the surface roughness.

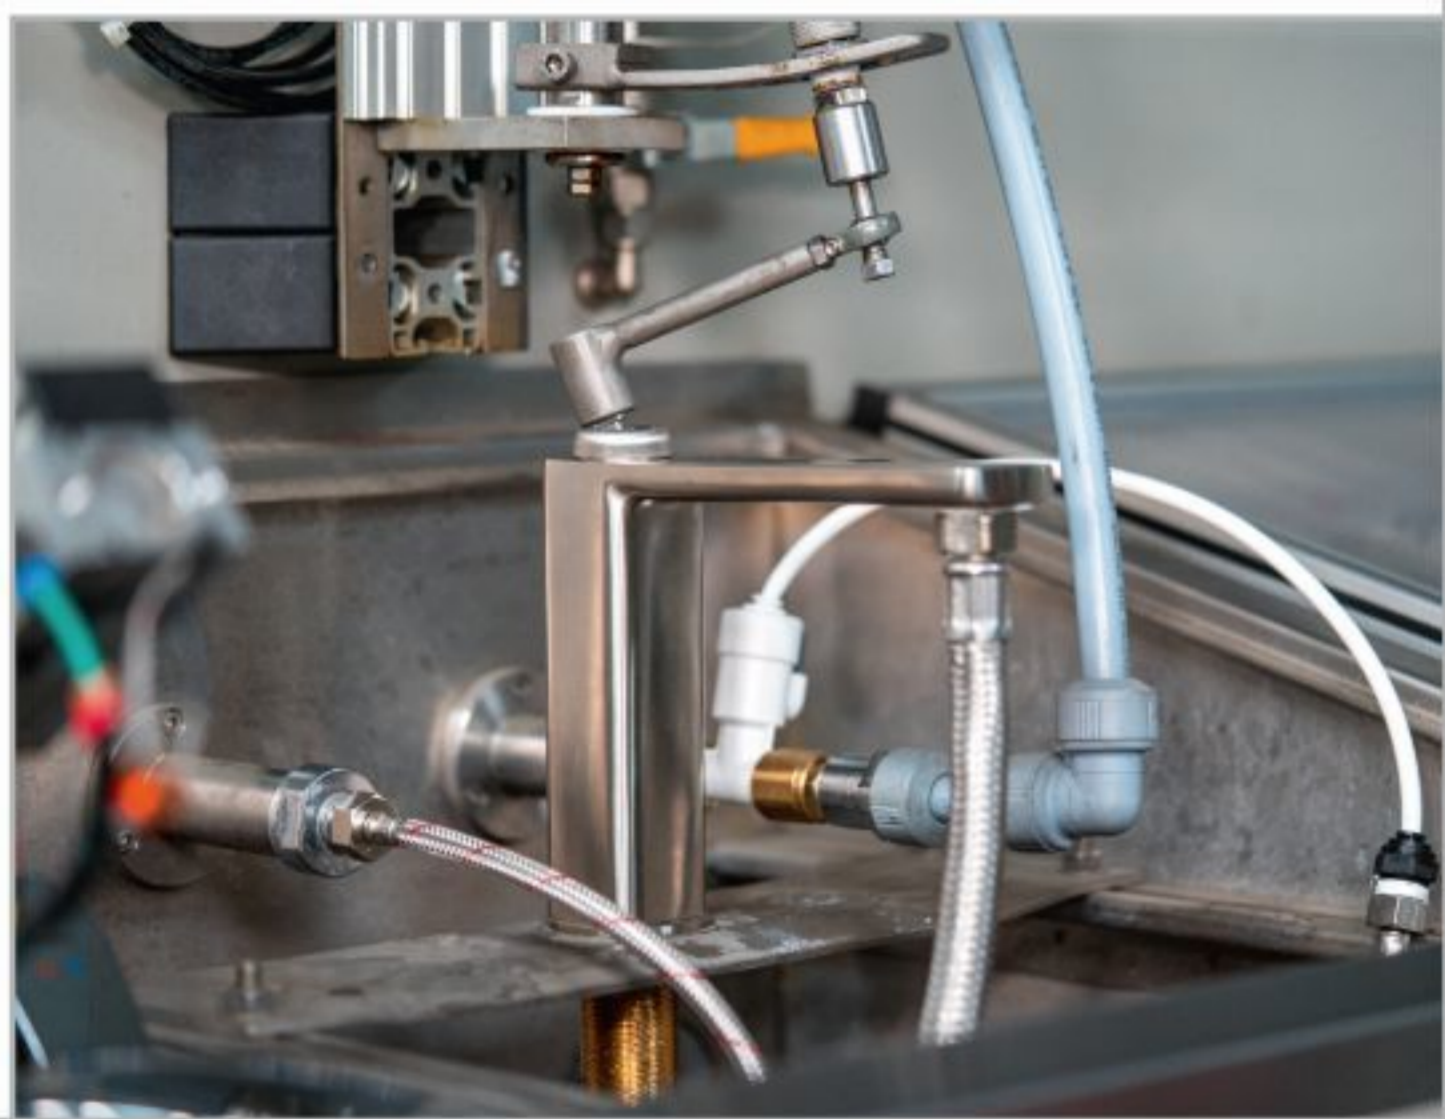

## POLISHING

Purpose of the polishing process is to file the microscopic irregularities of the body so as to make the treated surfaces as smooth as possible, so that the light reflection becomes more uniform.

## CHROME-PLATING

Chrome-plating involves the immersion of the tap body to be chromed in a series of basins. In a first series of these ones the piece is degreased and cleaned. The main basin (where the piece stays longer) is that of the electrolytic nickel solution. Before carrying chrome, it is crucial to create a layer of nickel to uniform the metal surface as microscopically as possible. After a further washing, it takes place the immersion in the basin of the electrolytic chrome solution.

## DURATION TEST

Process consisting in testing the finished product to guarantee performance, reliability and durability over time with reference to the regulation EN 200 and EN 817.

## ASSEMBLY AND TESTING

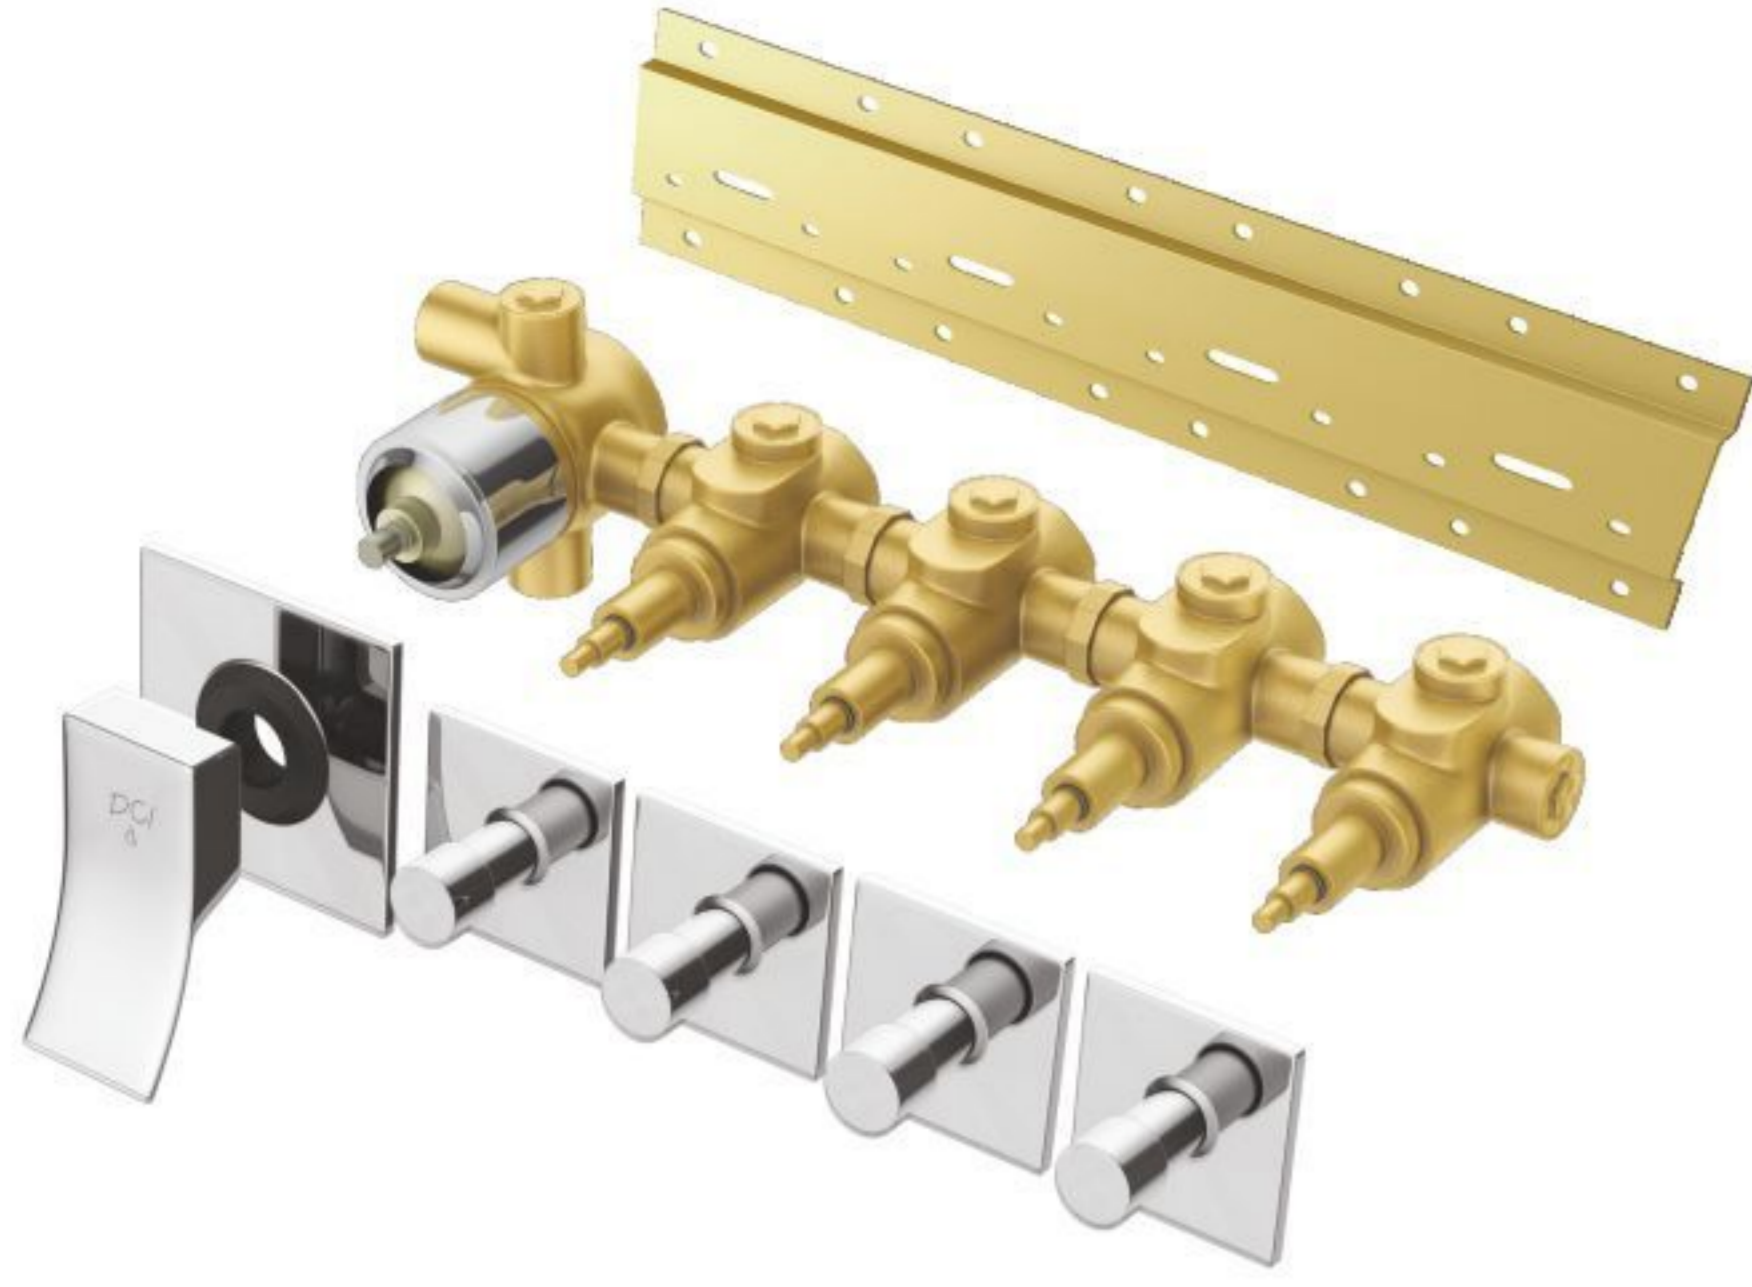

Process dedicated to the operations necessary to join the various parts, pre-assembled or individual of the tap.

## PACKAGING & SHIPPING

The finished and controlled product equipped with warranty certificate is packaged & The product is ready to be shipped worldwide.

**NOTE :** IN ALL BELOW PRODUCT PRESSURE PUMP MUST BE REQUIRED.

**HIGH FLOW MULTI-FUNCTION DIVERTER**

Thanks to innovative technology with DCI Multifunction Diverters, you can enjoy water at a constant temperature, providing reliable protection against scorching hot surprises, offering comfort and safety to everyone. This highly versatile Diverter can be easily customized based on requirements of a shower-area.

**Configuration Options :** Vertical Setting with THREE / FOUR / FIVE separate outlets.

**3 OUTLET OPTION**

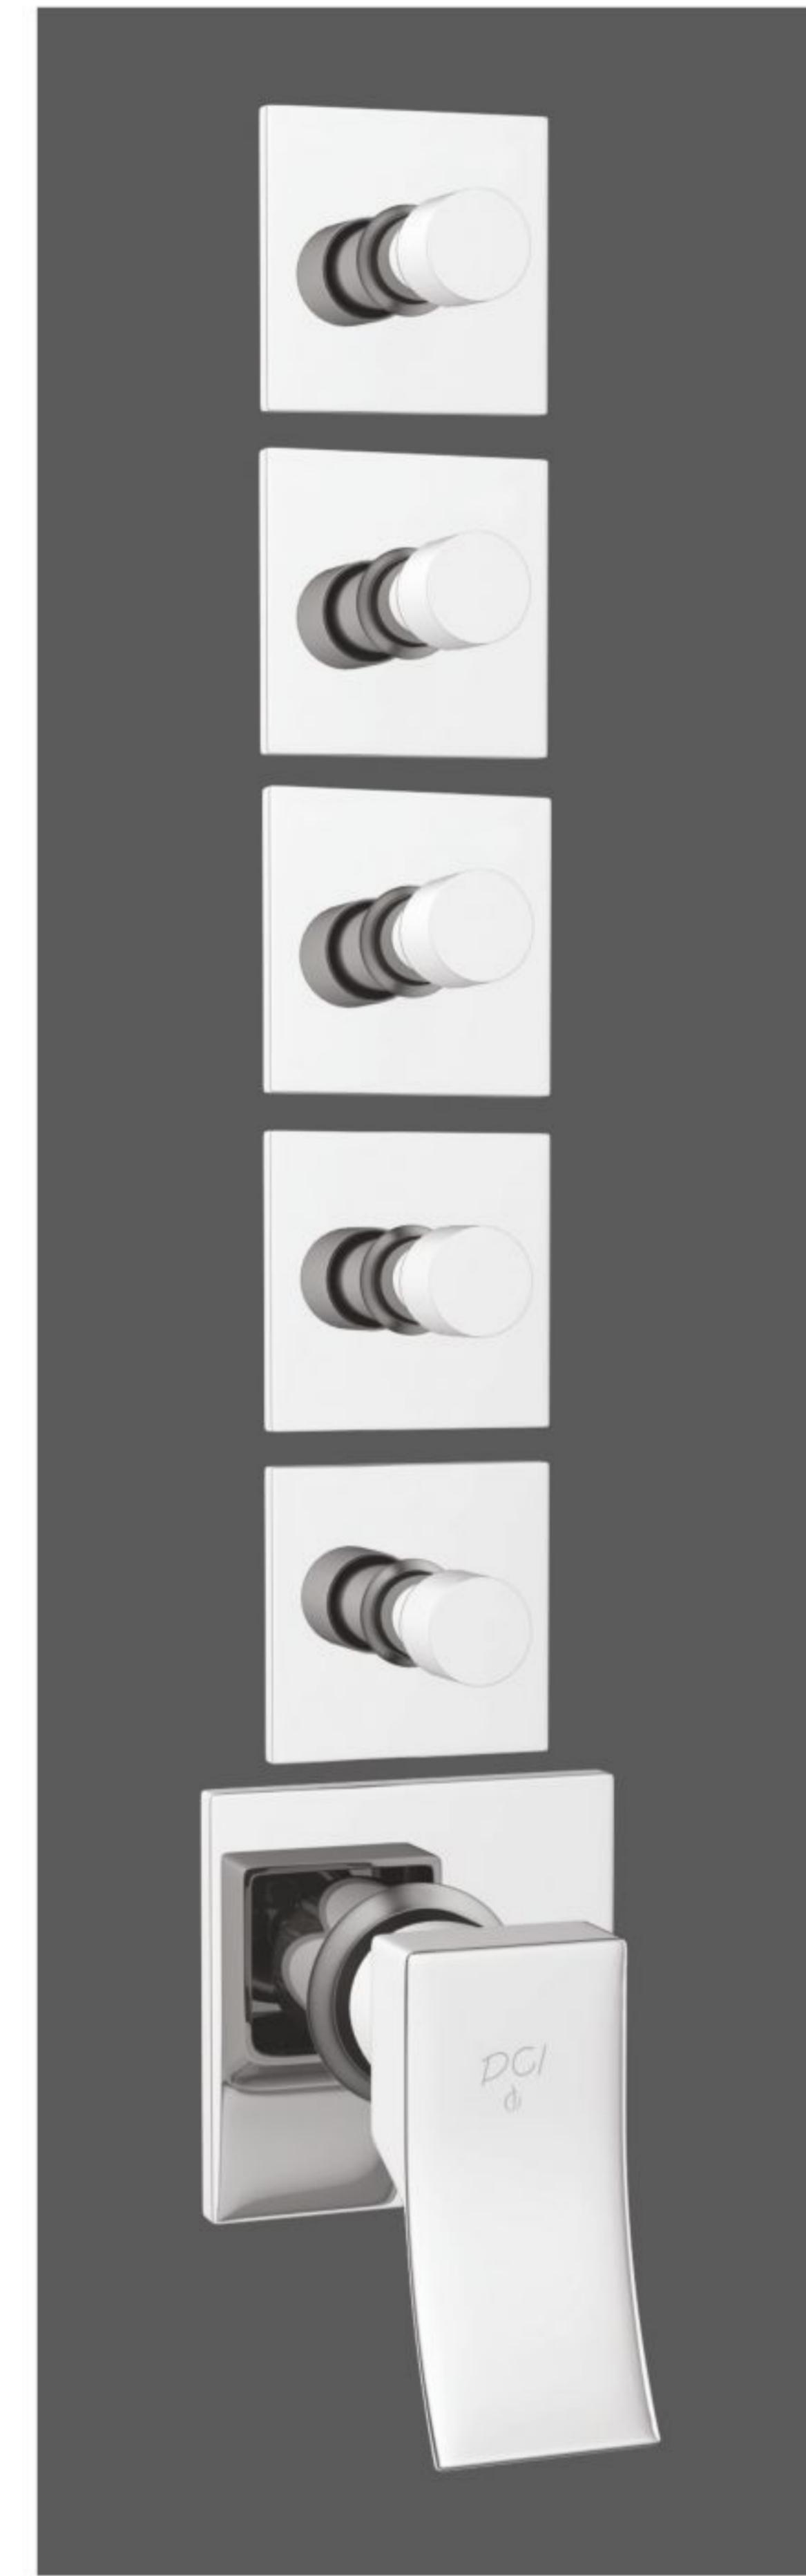

Concealed High Flow Multifunction Diverter with Individual control unit option for **3 outlets 20 mm (3/4") Inlet**

**4 OUTLET OPTION**

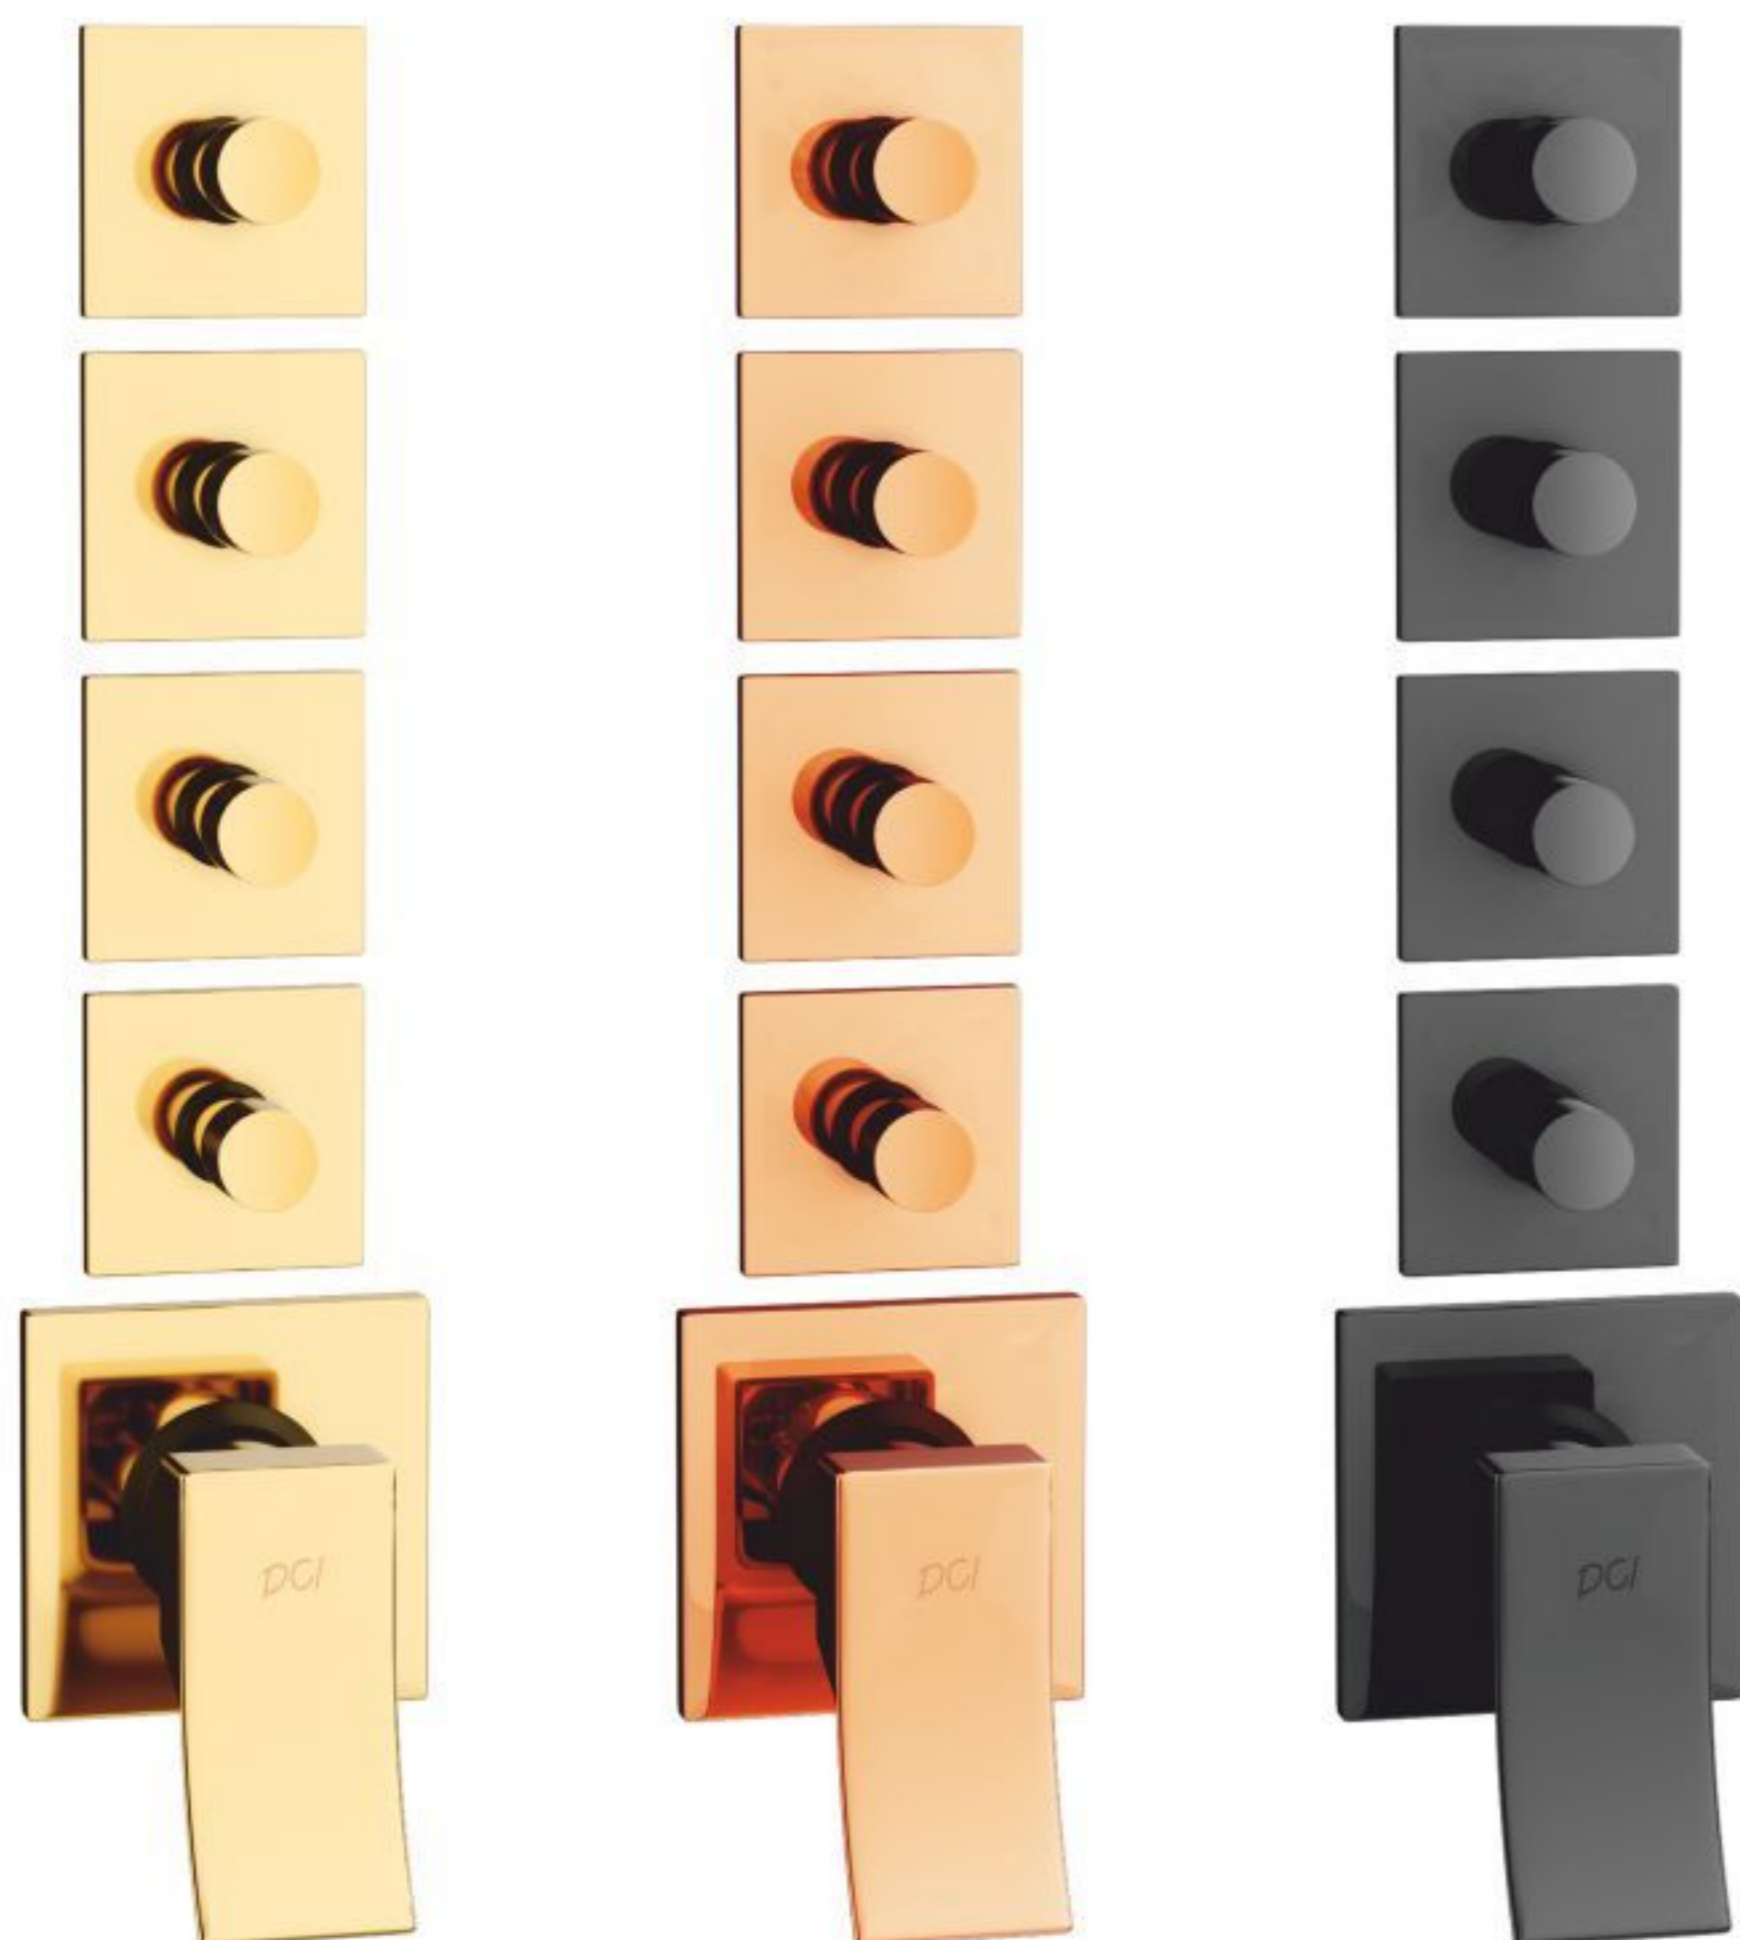

Concealed High Flow Multifunction Diverter with Individual control unit option for **4 outlets 20 mm (3/4") Inlet**

**5 OUTLET OPTION**

Concealed High Flow Multifunction Diverter with Individual control unit option for **5 outlets 20 mm (3/4") Inlet**
